Digital Portfolio Development

18 April 2021

Reflection

I am extremely pleased with the work I have completed on my digital portfolio. At first, it was a bit difficult to figure out what kind of design I would want, as well as figuring out the coding; but that quickly dissolved once I really invested my time into this and perfecting it to the best of my ability. I decided that I wanted to design and develop my portfolio from scratch—using HTML and CSS to showcase my years’ worth of web programming, design, and developmental skills to future employers and people in general—making it my best work to date (in my perspective). Everything I have learned and done regarding interactive multimedia has finally paid off, and it shows in this piece.

As pleased as I am with my piece, I do, however, believe that I could have made my piece a bit more interactive allowing that communication and interaction with my users. Although my digital portfolio is not an “interactive” website by any means, offering users with content that is amusing, collaborative, and engaging is the essential objective of any website and/or piece. I decided to stick to a more simplistic look for my website—sticking with neutral colors (black, gray, and white). Despite wanting to create a more visually appealing digital portfolio, I am tremendously delighted by the outcome of my long-awaited digital portfolio.
